

Powering e-Commerce Globally

POS SOLUTIONS

Powering financial growth through an affordable & secure payment gateway—ideal for e-commerce

- Engineered to eliminate the need for merchants to store credit card data.
- Compliant with Payment Card Industry (PCI) Data Security Standards
- Detailed authorization logs and batch settlement reports available as soon as transactions occur
- Support for all card types, card present and not present transactions, transactions that require level 2 purchasing card data, and more
- Annual association changes generally handled by Merchant e-Solutions at the host level—minimizing the impact to the merchant
- Unique design features that help transactions qualify for the best rates, minimize rejects, and eliminate duplicate transaction processing—recipient of annual Visa award for lowest incidents of duplicate transactions
- Easy to implement

Features	Description
DIAL & IP TERMINALS	Support for the most current Dial and IP (Internet) terminals that are compliant with the latest PCI standards
MES VIRTUAL TERMINAL	Browser-based solution that requires only a computer and access to the web to process credit card payments Designed so that merchants never have to update payment software Supports single and batched transactions, card present and not present transactions, and recurring payments Auto-identifies business and commercial card payments to help keep data entry to a minimum Special features enable control of AVS and CVV settings and alert merchants to conditions that result in higher rates
MES PAYMENT GATEWAY	Ideally suited for high volume businesses that require a direct systems connection to process payments Streamlined Application Program Interface (API) that's easy on IT resources Quick certification process that includes best rate verification Easy way to integrate existing order-entry products, shopping carts, and electronic retail systems and cash registers
